

Job Offer: FVL Service Development Engineer

We are offering one outstanding candidate the chance to be a **Service Development Engineer** in our Finished Vehicle Logistics business unit in Supply Chain Division.

You will be responsible for application development, customization and data integration, effectively providing support/lead technical and user acceptance testing during development projects.

- **What are you accountable for achieving?**

- Support creation of business requirement documents and produce appropriate IT design/definition documents.
- Assist in all the IT FVL Supervisor on all application development and data integration projects.
- Act as technical support to FVL Logistics Services application support team.
- Provide consultancy and technical and operational advice to the IT FVL Supervisor and the business unit.

- **What will you need as a successful FVL Service Development Engineer?**

- Strong team player.
- Ability to communicate and collaborate with customers, colleagues and supervisors.
- High level knowledge of Object Orientation.
- Good English communication skills (verbal and written).
- Self-motivated with excellent organizational skills and the ability to react quickly and calmly within a demanding environment.
- Knowledge of Microsoft operating systems.
- Proficiency of core programming language & database (C/C++,VB/.NET/C# and SQL).

Please note the work center is allocated in Almussafes (Valencia).

If this sounds like a role for you, please send your CV updated in English to Francisco.Ramon@dhl.com, or visit our website <https://www.dpdhl.jobs/search-jobs>.
