Ingeniero Front - end / Ingeniero backend

EMPRESA

Startup Big data desarrolla productos de identificación de riesgos emergentes para empresas

FUNCIONES

Empresa con la sede en Londres que va a establecerse en Valencia. Busca: Ingeniero backend We are looking for an Python programmers with good understanding of system design and strong coding practices. We need him or her to be a team player and be ready to support our data science team with turning clunky prototypes into solid code. Depending on experience the candidate will also be expected to bring in good coding practices and establish and maintain a coding culture across the whole tech team. We value simplicity and thorough design, always leaving the code cleaner than you found it, using the right names, and exposing the data the best possible way. Our Data Engineer stack includes MongoDB, ElasticSearch, AWS, Panda, GIT, spaCy for (natural Language Processing), MySQL, Kafka. Ingeniero Junior Front-end / Full Stack Web We're looking for a highly motivated front-end engineer with strong problem solving skills, a curiosity for technologies, and a passion for user interface, to join our product team in developing our platform as we improve the product and re-architect for its scale. You will be the bridge between design and engineering, responsible for making sure the front-end application is performing at its best and in line with the latest features/capabilities as much as possible The role provides the opportunity to work on various aspects of the software solution, including UX conception, feature delivery, defect fixing, and optimization. Based out of Valencia, you will interact on a daily basis with the team in our London Office, which means that we require an advanced knowledge of English
