

WE'RE HIRING!

SOFTWARE DEVELOPER

K³

We're looking for you!
software developer (m/f)

Our profile

We are an engineering service provider based in Valencia. We design and build applications and entire systems from scratch, or contribute modular components to large architectures. We develop web applications, embedded or distributed systems and tackle challenges with machine learning. We consult, research and model the best solutions for our clients from various industries. Technologies and programming languages are never an end in itself but always tools to engineer solutions.

You

- deliver software that works. Always.
- seek challenges, find and define problems and enjoy researching and engineering solutions.
- perfect code structure and style but know what to focus on if the deadlines require it.
- work independently and consider quality code your highest responsibility.
- perceive yourself as a generalist: you learn new tools, programming languages or technologies quickly if the task at hand calls for it.
- are a strong communicator and team player with a hands-on mindset.

Your tasks

- You design, develop, test, debug, deploy, maintain and optimize SW as part of an agile team.
- You work on all levels of web software development, on web front-end applications with various frameworks, back-end servers and their APIs, databases, devOps, as well as hybrid mobile apps.
- You design and implement applications and their underlying systems from scratch as well as software which is already in production.
- You develop innovative solutions, write documentations and present them to your team.

We offer

- a varied and interesting work with a dedicated team
- support through experienced software engineers
